CONTENTS

january 1989 volume 55 number 1

1 Steady-state distribution of gating charge in crayfish giant axons
Martin D. Rayner and John G. Starkus

21 The spectrin network as a barrier to lateral diffusion in erythrocytes. A percolation analysis
Michael J. Saxton

29 Dielectric behavior of aqueous solutions of plasmid DNA at microwave frequencies
C. Gabriel, E. H. Grant, R. Tata, P. R. Brown, B. Gestblom, and E. Noreland

35 Potassium channel of cardiac sarcoplasmic reticulum is a multi-ion channel
Joseph A. Hill, Jr., Roberto Coronado, and Harold C. Strauss

47 A lyotrope gradient method for liquid crystal temperature-composition-mesomorph diagram construction using time-resolved x-ray diffraction
Martin Caffrey

53 Intracellular pH and cell-to-cell transmission in sheep Purkinje fibers
Milton L. Pressler

67 Energy distributions at the high-spin ferric sites in myoglobin crystals
Francis G. Fiamingo, Arthur S. Brill, Don A. Hampton, and Reed Thorkildsen

79 Adenosine triphosphate utilization rates and metabolic pool sizes in intact cells measured by transfer of ^{18}O from water
Steven M. Dawis, Timothy F. Walseth, Mark A. Deeg, Richard A. Heyman, Richard M. Graeff, and Nelson D. Goldberg

101 Tilted view reconstruction in optical microscopy. Three-dimensional reconstruction of *Drosophila melanogaster* embryo nuclei
Peter J. Shaw, David A. Agard, Yasushi Hiraoka, and John W. Sedat

111 Chain configuration and flexibility gradient in phospholipid membranes. Comparison between spin-label electron spin resonance and deuteron nuclear magnetic resonance, and identification of new conformations
Michael Moser, Derek Marsh, Peter Meier, Karl-Heinz Wassmer, and Gerd Kothe

125 Frequency specificity in intercellular communication. Influence of patterns of periodic signaling on target cell responsiveness
Yue-Xian Li and Albert Goldbeter

147 Stochastic theory of singly occupied ion channels. II. Effects of access resistance and potential gradients extending into the bath
See-Wing Chiu and Eric Jakobsson

159 Radiation-damaged tyrosinase molecules are inactive
E. S. Kempner and J. H. Miller

163 Transport rates of proteins in porus materials with known microgeometry
W. Mark Saltzman and Robert Langer

173 Regional stress in a noncircular cylinder
Ronald F. Janz, Siddick Ozpetek, Leonard E. Ginzton, and Michael M. Laks

183 Synchronization between beating cilia
Larisa Gheber and Zvi Priel

brief communications

193 Halorhodopsin and sensory rhodopsin contain a C_6—C_7-s-*trans* retinal chromophore
David R. Baselt, Stephen P. A. Fodor, Rob van der Steen, Johan Lugtenburg, Robert A. Bogomolni, and Richard A. Mathies

197 Internal and external K^+ help gate the inward rectifier
Ira S. Cohen, Dario DiFrancesco, Nancy K. Mulrine, and Peter Pennefather

203 TEA prevents inactivation while blocking open K^+ channels in human T lymphocytes
Stephan Grissmer and Michael Cahalan

letter to the editor

207 Reconstitution of membrane proteins: a selected bibliography from Biophysical Society workshop on membrane protein reconstitution, 2 March 1988
John R. Silvius and Theresa M. Allen

209 *Correction*

february 1989 volume 55 number 2

213 Separation of the rotational contribution in fluorescence correlation experiments
P. Kask, P. Piksarv, M. Pooga, Ü. Mets, and E. Lippmaa

221 Two-site exchange revisited: a new method for extracting exchange parameters in biological systems
R. V. Mulkern, A. R. Bleier, I. K. Adzamli, R. G. S. Spencer, T. Sandor, and F. A. Jolesz

233 Photolysis intermediates of the artificial visual pigment *cis*-5, 6-dihydroisorhodopsin
A. Albeck, N. Friedman, M. Ottolenghi, M. Sheves, C. M. Einterz, S. J. Hug, J. W. Lewis, and D. S. Kliger

243 Capsid of small papova viruses contains 72 pentameric capsomeres. Direct evidence from cryoelectron microscopy of simian virus 40
Timothy S. Baker, Jacqueline Drak, and Minou Bina

255 Elasticity of the human red cell membrane skeleton. Effects of temperature and denaturants
Beata G. Vertessy and Theodore L. Steck

263 Picosecond time-resolved fluorescence spectroscopy of K-590 in the bacteriorhodopsin photocycle
G. H. Atkinson, D. Blanchard, H. Lemaire, T. L. Brack, and H. Hayashi

275 An analytic solution to the Monod-Wyman-Changeux model and all parameters in this model
G. Zhou, P. S. Ho, and K. E. van Holde

281 Effect of chain unsaturation on the structure and thermotropic properties of galactocerebrosides
R. A. Reed and G. G. Shipley

293 pH dependence of actin self-assembly
Fei Wang, Rosemary V. Sampogna, and Bennie R. Ware

299 Measurement of nonuniform current densities and current kinetics in *Aplysia* neurons using a large patch method
Jon W. Johnson and Stuart Thompson

309 Relations for lipid bilayers. Connection of electron density profiles to other structural quantities
J. F. Nagle and M. C. Wiener

315 Structure of the fully hydrated gel phase of dipalmitoylphosphatidylcholine
M. C. Wiener, R. M. Suter, and J. F. Nagle

327 Thermodynamic parameters for the binding of divalent cations to gramicidin A incorporated into a lipid environment by Tl-205 nuclear magnetic resonance
James F. Hinton, Juan Q. Hernandez, Dikoma C. Shungu, and Francis S. Millett

331 Dielectric properties of *Artemia* cysts at low water contents. Evidence for a percolative transition
F. Bruni, G. Careri, and J. S. Clegg

339 Calculation of intermolecular interaction strengths in the $P_{\beta'}$ phase in lipid bilayers. Implications for theoretical models
H. L. Scott and P. A. Pearce

brief communications

347 Osmotic and pharmacological effects of formamide on capacity current, gating current, and sodium current in crayfish giant axons
D. A. Alicata, M. D. Rayner, and J. G. Starkus

355 Two-dimensional $^{1}H/^{13}C$ heteronuclear chemical shift correlation spectroscopy of lipid bilayers
Carolyn W. B. Lee and Robert G. Griffin

359 Influence of negative surface charge on toxin binding to canine heart Na channels in planar bilayers
Arippa Ravindran and Edward Moczydlowski

367 Streaming potential measurements in Ca^{2+}-activated K^+ channels from skeletal and smooth muscle coupling of ion and water fluxes
Carmen Alcayaga, Ximena Cecchi, Osvaldo Alvarez, and Ramón Latorre

letters to the editor

373 Testing fractal and Markov models of ion channel kinetics
Larry S. Liebovitch

379 Model selection: reliability and bias
Richard Horn and Stephen J. Korn

383 Fractal models, Markov models, and channel kinetics
O. B. McManus, C. E. Spivak, A. L. Blatz, D. S. Weiss, and K. L. Magleby

387 *Correction*

march 1989 volume 55 number 3

393 Interaction of tetanus toxin with lipid vesicles. Effects of pH, surface charge, and transmembrane potential on the kinetics of channel formation
Gianfranco Menestrina, Stefano Forti, and Franco Gambale

407 Slow inactivation and reactivation of the K^+ channel in squid axons. A tail current analysis
John R. Clay

415 Multiple conductance states of the purified calcium release channel complex from skeletal sarcoplasmic reticulum
Qi-Yi Liu, F. Anthony Lai, Eric Rousseau, Rodney V. Jones, and Gerhard Meissner

425 Effects of various anions on the Raman spectrum of halorhodopsin
C. Pande, J. K. Lanyi, and R. H. Callender

433 Analysis of equatorial x-ray diffraction patterns from skeletal muscle
Leepo C. Yu

441 Structures of actomyosin cross-bridges in relaxed and rigor muscle fibers
Leepo C. Yu and Bernhard Brenner

455 Three-dimensional reconstruction of the ribosome from *Escherichia coli*
Terence Wagenknecht, Jose María Carazo, Michael Radermacher, and Joachim Frank

465 Variations of the three-dimensional structure of the *Escherichia coli* 70S monosome in the range of overlap views. An application of the methods of multicone and local single-cone three-dimensional reconstruction
Jose María Carazo, Terence Wagenknecht, and Joachim Frank

479 Theoretical and experimental studies on cross-bridge migration during cell disaggregation
Aydin Tozeren, Kuo-Li Paul Sung, and Shu Chien

489 Continuum model of voltage-dependent gating. Macroscopic conductance, gating current, and single-channel behavior
David G. Levitt

499 Sarcomere length dependence of the force-velocity relation in single frog muscle fibers
H. L. M. Granzier, D. H. Burns, and G. H. Pollack

509 Determination of bilayer membrane bending stiffness by tether formation from giant, thin-walled vesicles
Lin Bo and Richard E. Waugh

519 System analysis of phycomyces light-growth response: madC, madG, and madH mutants
Anuradha Palit, Promod R. Pratap, and Edward D. Lipson

527 Simulation of concentration polarization in electrokinetic processes by network thermodynamic methods
J. Horno, C. F. González-Fernández, A. Hayas, and F. González-Cabellero

537 Dynamic imaging of lateral diffusion by electron spin resonance and study of rotational dynamics in model membranes. Effect of cholesterol
Y.-K. Shin and Jack H. Freed

551 Calorimetric studies of the effects of cholesterol on the phase transition of C(18):C(10) phosphatidylcholine
Parkson Lee-Gau Chong and Donna Choate

557 Interfacial properties of gramicidin and gramicidin-lipid mixtures measured with static and dynamic monolayer techniques
H. Tournois, P. Gieles, R. Demel, J. de Gier, and B. de Kruijff

brief communications

571 Measurement of Na-K pump current in acinar cells of rat lacrimal glands
R. Dipolo and A. Marty

575 Fluorescence lifetime studies with staphylococcal nuclease and its site-directed mutant. Test of the hypothesis that proline isomerism is the basis for nonexponential decays
Maurice R. Eftink, Camillo A. Ghiron, Roger A. Kautz, and Robert O. Fox

letter to the editor

581 Surface charge density of purple membrane
Robert Renthal

585 Correction

587 Correction

589 Correction

591 Correction

april 1989 volume 55 number 4

595 Role of MgATP and MgADP in the cross-bridge kinetics in chemically skinned rabbit psoas fibers. Study of a fast exponential process (C)
Masataka Kawai and Herbert R. Halvorson

605 Weakly attached cross-bridges in relaxed frog muscle fibers
D. W. G. Jung, T. Blangé, H. de Graaf, and B. W. Treijtel

621 Nicotinamide adenine dinucleotide fluorescence spectroscopy and imaging of isolated cardiac myocytes
John Eng, Ronald M. Lynch, and Robert S. Balaban

631 On the coordination of La^{3+} by phosphatidylserine
Matthew Petersheim and Joanne Sun

637 An intramolecular hydrogen bond with large proton polarizability within the head group of phosphatidylserine. An infrared investigation
Klaus Leberle, Ingrid Kempf, and Georg Zundel

649 Ultrasonic Cole-Cole diagram for solutions and application to α-chymotrypsin
Roger Cerf, Seyed-Taghi Salehi, and Daniel Rogez

655 A nonlinear cascade model for action potential encoding in an insect sensory neuron
Andrew S. French and Michael J. Korenberg

663 Simultaneous measurement of changes in current and tracer flux in voltage-clamped squid giant axon
R. F. Rakowski

673 Estimation of single channel kinetic parameters from data subject to limited time resolution
R. K. Milne, G. F. Yeo, B. W. Madsen, and R. O. Edeson

677 Influence of proteins on the reorganization of phospholipid bilayers into large domains
Doris M. Haverstick and Michael Glaser

683 Cell poking: quantitative analysis of indentation of thick viscoelastic layers
Marek Duszyk, Bill Schwab III, George Ireneus Zahalak, Hong Qian, and Elliot L. Elson

691 An extended Monod-Wyman-Changeaux model expressed in terms of the Herzfeld-Stanley formalism applied to oxygen and carbonmonoxide binding curves of hemoglobin trout IV
Reinhard Schweitzer-Stenner and Wolfgang Dreybrodt

703 Detection of the heme perturbations caused by the quaternary R $\rightarrow$ T transition in oxyhemoglobin trout IV by resonance Raman scattering
Reinhard Schweitzer-Stenner, Dörte Wedekind, and Wolfgang Dreybrodt

713 Interactions between actin and myosin filaments in skeletal muscle visualized in frozen-hydrated thin sections
B. L. Trus, A. C. Steven, A. W. McDowall, M. Unser, J. Dubochet, and R. J. Podolsky

725 Wavelength regulation in iodopsin, a cone pigment
J. G. Chen, T. Nakamura, T. G. Ebrey, H. Ok, K. Konno, F. Derguini, K. Nakanishi, and B. Honig

731 Nonstationary fluctuation analysis of the delayed rectifier K channel in cardiac Purkinje fibers. Actions of norepinephrine on single channel current
Paul B. Bennett, Robert Kass, and Ted Begenisich

739 Effect of Mg^{2+} concentration on Ca^{2+} uptake kinetics and structure of the sarcoplasmic reticulum membrane
Francisco J. Asturias and J. Kent Blasie

755 Action potentials initiated by single channels opening in a small neuron (rat olfactory receptor)
Joseph W. Lynch and Peter H. Barry

769 Partitioning and location of Bay K 8644, 1,4-dihydropyridine calcium channel agonist, in model and biological lipid membranes
R. Preston Mason, Gregory E. Gonye, David W. Chester, and Leo G. Herbette

779 Interactions of amiloride and small monovalent cations with the epithelial sodium channel. Inferences about the nature of the channel pore
Lawrence G. Palmer and Olaf S. Andersen

brief communications

789 Lysophosphatidylcholine stabilizes small unilamellar phosphatidylcholine vesicles. Phosphorus-31 NMR evidence for the "wedge" effect
V.V. Kumar, Barbara Malewicz, and Wolfgang J. Baumann

793 Caffeine slows turn-off of calcium release in voltage clamped skeletal muscle fibers
Bruce J. Simon, Michael G. Klein, and Martin F. Schneider

799 New class of ^{19}F pH indicators: fluoroanilines
Carol J. Deutsch and June S. Taylor

805 Lateral diffusion of membrane proteins in protein-rich membranes: a simple hard particle model for concentration dependence of the two-dimensional diffusion coefficient
Allen P. Minton

809 Correction

may 1989 volume 55 number 5

817 Self diffusion of interacting membrane proteins
James R. Abney, Bethe A. Scalettar, and John C. Owicki

835 Determination of the absolute orientation of the retinylidene chromophore in purple membrane by a second-harmonic interference technique
Jung Y. Huang and Aaron Lewis

843 Direct measurement of translingual epithelial NaCl and KCl currents during the chorda tympani taste response
Gerard L. Heck, Krishna C. Persaud, and John A. DeSimone

859 Effect of Ca^{2+} diffusion on the time course of neurotransmitter release
H. Parnas, G. Hovav, and I. Parnas

875 Sequential model to describe the nicotinic synaptic current
H. Parnas, M. Flashner, and M. E. Spira

885 Quenching of fluorescence of pyrene-substituted lecithin by tetracyanoquinodimethane in liposomes
Helge Lemmetyinen, Marjo Yliperttula, Jukka Mikkola, and Paavo Kinnunen

897 Repulsive interactions between uncharged bilayers. Hydration and fluctuation pressures for monoglycerides
Thomas J. McIntosh, Alan D. Magid, and Sidney A. Simon

905 Dynamics of a tightly coupled mechanism for flagellar rotation. Bacterial motility, chemiosmotic coupling, protonmotive force
Markus Meister, S. Roy Caplan, and Howard C. Berg

915 Closed-time distribution of ionic channels. Analytical solution to a one-dimensional defect-diffusion model
C. A. Condat and J. Jäckle

927 Triplet state properties of tryptophan residues in complexes of mutated *Escherichia coli* single-stranded DNA binding proteins with single-stranded polynucleotides
Désirée H. H. Tsao, Jose R. Casas-Finet, August H. Maki, and John W. Chase

937 Order and dynamics in the lamellar L_α and in the hexagonal H_{II} phase. Dioleoylphosphatidylethanolamine studied with angle-resolved fluorescence depolarization
Herman van Langen, Charles A. Schrama, Gijs van Ginkel, Gerard Ranke, and Yehudi K. Levine

949 Structural parameters of the myelin transmembrane proteolipid in reverse micelles
B. P. Binks, D. Chatenay, C. Nicot, W. Urbach, and M. Waks

957 On the position of the hydro-phobic/philic boundary in lipid bilayers
James R. Scherer

965 Dependence of lipid chain and head group packing of the inverted hexagonal phase on hydration
James R. Scherer

973 Fusion of synaptic vesicle membranes with planar bilayer membranes
Mark S. Perin and Robert C. MacDonald

987 Current injection into a two-dimensional anisotropic bidomain
Nestor G. Sepulveda, Bradley J. Roth, and John P. Wikswo, Jr.

1001 Electromechanical permeabilization of lipid vesicles. Role of membrane tension and compressibility
D. Needham and R. M. Hochmuth

brief communications

1011 Mitotic orientation in three dimensions determined from multiple projections
Matthew Bjerknes and Hazel Cheng

1017 Viscoelastic relaxation of bilayer lipid membranes. II. Temperature dependence of relaxation time
J. C. Earnshaw and G. E. Crawford

june 1989 volume 55 number 6

1025 Fluorescence depolarization study of lamellar liquid crystalline to inverted cylindrical micellar phase transition of phosphatidylethanolamine
Kwan Hon Cheng

1033 Rapid mechanical and thermal changes in the garfish olfactory nerve associated with a propagated impulse
Ichiji Tasaki, Kiyoshi Kusano, and Paul M. Byrne

1041 How electrolyte shielding influences the electrical potential in transmembrane ion channels
Peter C. Jordan, Russell J. Bacquet, J. Andrew McCammon, and Phouc Tran

1053 Mechanics and control of the cytoskeleton in *Amoeba proteus*
Micah Dembo

1081 Continuous fluorescence microphotolysis of anthracene-labeled phospholipids in membranes. Theoretical approach of the simultaneous determination of their photodimerization and lateral diffusion rates
Xavier Ferrieres, André Lopez, Anne Altibelli, Laurence Dupou-Cezanne, Jean-Louis Lagouanelle, and Jean-François Tocanne

1093 Water adsorption isotherms and hydration forces for isolipids and diacyl phospholipids
Derek Marsh

1101 ΔpH-induced fluorescence quenching of 9-aminoacridine in lipid vesicles is due to excimer formation at the membrane
Stephan Grzesiek, Harald Otto, and Norbert A. Dencher

1111 Critical density fluctuations in lipid bilayers detected by fluorescence lifetime heterogeneity
Anthony Ruggiero and Bruce Hudson

1125 Analysis of the anisotropy decay of *trans*-parinaric acid in lipid bilayers
Anthony Ruggiero and Bruce Hudson

1137 Resonance Raman enhancement of the Mn—N—O bending mode in nitrosyl manganese "strapped" and "open" heme complexes
Nai-Teng Yu, Shun-Hua Lin, Chi K. Chang, and Klaus Gersonde

1145 Biomagnetic functional localization of a peripheral nerve in man
Lutz Trahms, Sergio N. Erné, Zvonko Trontelj, Gabriel Curio, and Peter Aust

1155 Analysis of protein–protein interaction by simulation of small-zone size exclusion chromatography. Stochastic formulation of kinetic rate contributions to observed high-performance liquid chromatography elution characteristics
Fred J. Stevens

1169 A system model for investigating passive electrical properties of neurons
A. D'Aguanno, B. L. Bardakjian, and P. L. Carlen

1183 Orientation of DNA in agarose gels
Julian Borejdo

1191 Frequency tuning in the electroreceptive periphery
Elizabeth S. Olson and Louise D. Smullin

1205 Kinetics of voltage-induced conductance increases in outer mitochondrial membrane
Kathleen W. Kinnally, Henry Tedeschi, Carmen A. Mannella, and Harry L. Frisch

1215 Evaluation of the thermal coefficient of the resistance to fluorophore rotation in model membranes
Suzanne F. Scarlata

1225 Simultaneous determination of intramolecular distance distributions and conformational dynamics by global analysis of energy transfer measurements
Joseph M. Beechem and Elisha Haas

1237 Low angle light scattering studies on whole, half, and quarter molecules of T2 bacteriophage DNA
J. A. Harpst and J. R. Dawson

1251 NaCl reflection coefficients in proximal tubule apical and basolateral membrane vesicles. Measurement by induced osmosis and solvent drag
David Pearce and A. S. Verkman

brief communications

1261 Use-dependent block of single sodium channels by lidocaine in guinea pig ventricular myocytes
Thomas V. McDonald, Kenneth R. Courtney, and William T. Clusin

1267 Intracellular magnesium blocks sodium outward currents in a voltage- and dose-dependent manner
Michael Pusch, Franco Conti, and Walter Stühmer

1273 Correction

1277 Correction
